

MOVEit® EZ

Secure File Transfer Client for Automated, Scheduled Transfers

TECHNICAL SPECIFICATIONS

- › HTTPS-based transfers via a single firewall port (443)
- › NIST FIPS 140-1 validated 128-bit SSL (TLS) encryption
- › Up to 25 separate automated upload or download tasks
- › Built-in task scheduling
- › Automatic zlib compression
- › Automatic retry and resume of transfer tasks
- › Validates X.509 server authentication certificates
- › Proxy server support
- › SHA1 file integrity checking
- › User-oriented transfer log

SYSTEM SPECIFICATIONS

- › Runs on Windows 7, 8.1 and 10

MOVEit EZ is a Windows-based file transfer client to automatically transfer files on a scheduled basis to and from MOVEit Transfer and MOVEit Cloud. It is easy to install, use, and support—and replaces the need for batch files or scripts.

MOVEit EZ is designed to work ‘as is’, but can also be pre-configured and/or re-branded for custom use. MOVEit EZ can be run in the foreground or as a service. A MOVEit EZ icon in the Windows system tray blinks and changes to alert the user to the status and outcome of file transfers.

MOVEit EZ can manage as many as twenty-five automated file transfer tasks, each with its own schedule and set of rules for handling files. Each can be used to upload or download files between one or more local folders and one or more folders on MOVEit Transfer or MOVEit Cloud. Files are transferred after they appear in the appropriate folder. There are no limits on the number, type, or size of the files sent.

MOVEit EZ tasks can also be used to automatically download updated versions and configurations from MOVEit Transfer and MOVEit Cloud and upload to any MOVEit EZ-generated update logs and/or transfer error logs.

Each file moved between MOVEit EZ and MOVEit Transfer or MOVEit Cloud is integrity checked before and after being sent — a security ‘best practice’ required by GLBA, HIPAA, PIPEDA, the PCI DSS, and SOX. Check results are logged by MOVEit and used with related authentication and authorization data to provide end-to-end file non-repudiation. Together with their automatic retry and resume capabilities, MOVEit EZ and MOVEit Transfer or MOVEit Cloud are able to provide file guaranteed delivery.
